

What is claimed is:

1. A mount for a fire sprinkler comprising
a base including a support, a first arm extending from the support and a second
arm extending from the support parallel and displaced from the first arm, the first arm
having a first support hole through the first arm and the second arm having a second
support hole through the second arm and aligned with the first hole;
5 a bracket including a first plate with a first end and a second end, a retaining hole
through the first plate adjacent the first end to receive the fire sprinkler, a first mounting
hole through the first plate adjacent the second end;
a threaded rod extending through the first support hole, the second support hole
10 and the first mounting hole.
2. The fire sprinkler mount of claim 1, the first support hole and the second
support hole being through holes, the first mounting hole being threaded on the
threaded rod, the threaded rod including rod ends with shoulders not extendable
through the first and second support holes.
3. The fire sprinkler mount of claim 2, one of the rod ends having a nut
thereon defining one of the shoulders and the other of the rod ends having an integral
head defining the other of the shoulders.
